

OPEN FIELD TRIP SOLOMON ISLANDS 8 - 20 January 2012

Emergency Architects Australia is offering 20 people the opportunity to travel to Obombollu in The Solomon Islands to participate in the delivery of village latrines over a 2 week period.

The project site is on the island of Ranongga, where EAA has been working since the 2007 earthquake and tsunami, and is part of a wider national sanitation program.

You will be accompanied by an experienced member of the EAA team and work alongside the community living in a typical village.

The community will provide all meals, which usually consists of rice, vegetables, fruit, tapioca and great seafood including tuna. There will also be time to learn about the community, visit significant sites and join the village in their afternoon volley ball competition.

Date: 8 - 20 January 2012

**Cost: \$3500 ex Brisbane and includes;
all flights, transfers, local travel, accomodation, food,
insurance and a contribution to materials for the project.**

Emergency Architects Australia (EAA) is a not for profit, non-sectarian, professional organisation. Our vision is that built environment expertise is available to communities in the Asia Pacific Region to help reduce avoidable risks from natural disasters and to assist communities with their reconstruction following disasters. EAA sends experienced architects and other built environment specialists to disaster areas to work alongside aid agencies, local communities, governments, and funding institutions to rebuild devastated areas in a sustainable way. Emergency Architects believes that the early construction of permanent rather than temporary structures, using local materials, delivers a faster long-term result.
